Patients of The Chest Clinic have access to multiple specialists in one location. The Chest Clinic provides a comprehensive team approach for the diagnosis and treatment of both benign and malignant abnormalities of the chest.

An Oncology Certified Nurse Navigator guides patients through The Chest Clinic. The Navigator acts as a resource and single point of contact for patients in order to seamlessly coordinate personalized care.

The Chest Clinic multidisciplinary team will conduct an in-depth review of the patient’s concern and focus on the individual to collectively create a plan of care.

The multidisciplinary team includes specialists from Pulmonary Medicine, Thoracic Surgery, Medical Oncology, Radiation Oncology, Radiology, Pathology, Nursing and support services such as Social Work and Dietary.

See reverse for more information
The Chest Clinic benefits:

• Patient-centered approach
• Evaluation by multi-specialty physicians with expertise in thoracic care
• Prompt and timely access to diagnostic services
• Single point of contact for patient support
• Expedited care from the time of presentation to the time of treatment
• Access to innovative and non-invasive procedures including: Endobronchial Ultrasound and Video Assisted Thoracic Surgery
• Access to a variety of clinical trials
